FENIX NTM® NANOTECH MATT MATERIAL FOR INTERIOR DESIGN

made in Italy by Arpa Industriale

MATERIAL PROPERTIES DATA SHEET | THIN

FENIX NTM® is an innovative material created for interior design by Arpa Industriale. It is produced by the simultaneous application of heat (approx. 150 °C) and high specific pressure (> 7 MPa) in order to have a homogeneous non-porous high density product.
The core structure of FENIX NTM is composed of paper impregnated with thermosetting resins. Its external surface involves the use of nanotechnology and its colour is obtained through next generation acrylic resins cured by Electron Beam Curing process.
FENIX NTM 0,9 mm is available in the Standard and Flame Retardant types.

Reaction to fire	The reaction to fire of applied FENIX NTM is related to the final composite panel where the FENIX NTM is bonded to a substrate. The results may be different depending on the substrates, the glue and the bonding techniques applied. The reaction to fire testing of the composite panel is under the responsibility of the panel manufacturer.

Note to laminates with adhesive protective film
The protective films are designed for temporary surface protection against dirt, scratches and tool marks; they are not designed for protection against corrosion, humidity or chemicals.
FENIX NTM panels covered with the protective film shall be stored in a clean, dry place at room temperature (15-22°C), avoiding weathering and UV exposure.
The protective film must be removed from the surface of FENIX NTM after the application and before putting into use the finite element. In any case, the removal must be made within six months from the date of shipment by Arpa Industriale. Arpa Industriale cannot be responsible for the misuse of FENIX NTM covered with the protective film, nor for the consequences for non-recommended applications.
